# Univariate Data

# Histogram

```
x = dataset["speeding"]
plt.hist(x,color = 'lavender', edgecolor = 'black')
plt.show()
```

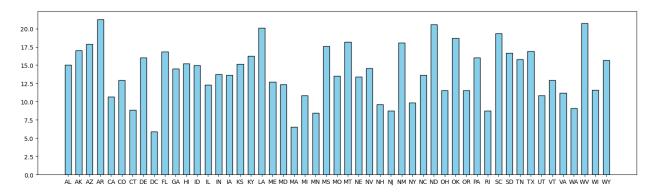

This graph indicates that most of the people drive in the speed values b/w 3 to 4

#### **Barcharts**

```
fig = plt.figure()
ax1 = fig.add_axes([0.1,0.1,2.2,0.8])

x = dataset["abbrev"]
y = dataset["no_previous"]
ax1.bar(x,y,color = 'skyblue',width = 0.6, edgecolor = 'black')

<BarContainer object of 51 artists>
```

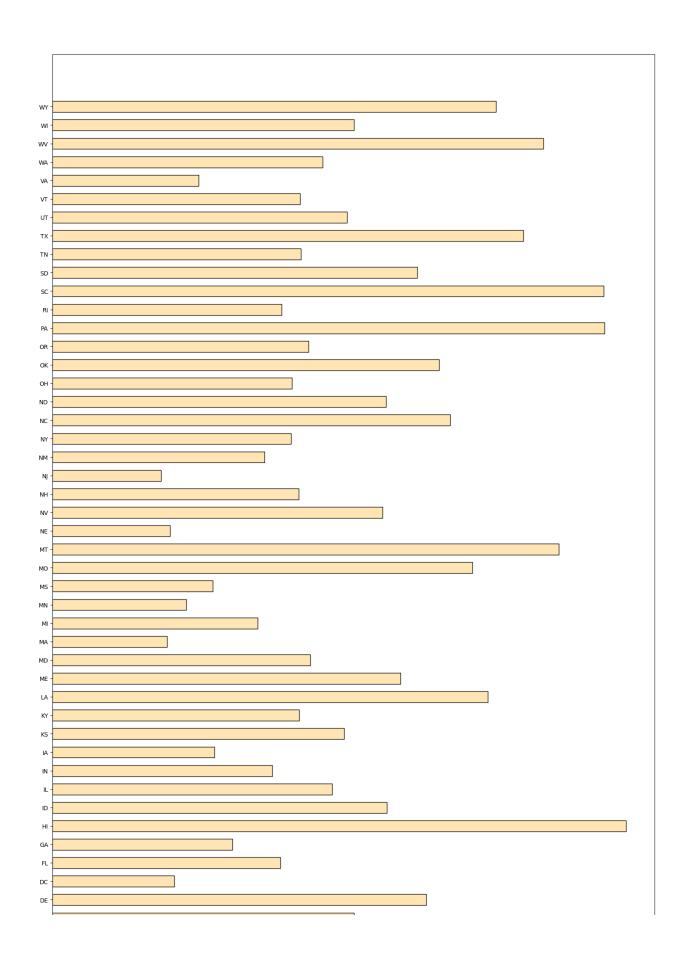

This graph indicates that AR has the highest number of people who did not have a previous accident

#### Barcharts Horizontal

```
fig = plt.figure()
ax1 = fig.add_axes([0.1,0.1,2.2,5])

x = dataset["abbrev"]
y = dataset["speeding"]
ax1.barh(x,y,color = "#FFE5B4",height = 0.6, edgecolor = "black")

<BarContainer object of 51 artists>
```

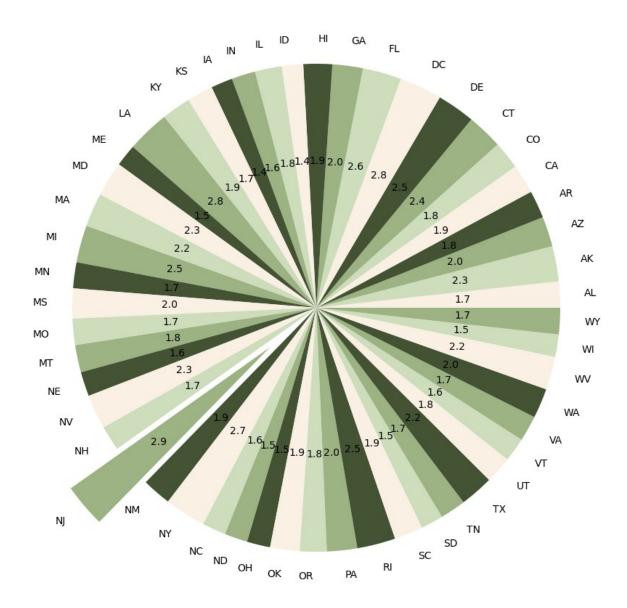

This graph indicates that people from HI drive the fastest

#### **Piecharts**

```
fig = plt.figure()
axes1 = fig.add_axes([0.1,0.1,1.75,1.75])
labels = dataset["abbrev"]
numbers = dataset["ins_premium"]

explode = np.zeros(numbers.count())
explode[numbers.argmax()] = 0.25

axes1.pie(numbers, labels = labels,explode = explode, autopct =
"%0.1f", colors = ["#FAF1E4", "#CEDEBD", "#9EB384", "#435334", ])
plt.show()
```

This graph indicates that NJ has pays the highest premium

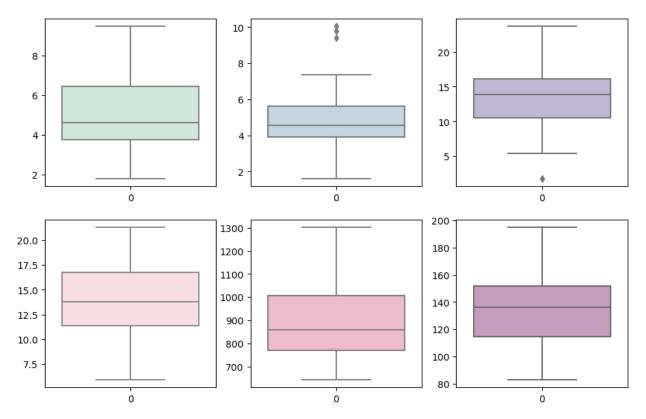

### **Boxplots**

```
plt.subplots(figsize = [11,7])
plt.subplot(2,3,1)
sns.boxplot(dataset["speeding"], color = "#CCE8DB")
plt.subplot(2,3,2)
sns.boxplot(dataset["alcohol"], color = "#C1D4E3")
plt.subplot(2,3,3)
sns.boxplot(dataset["not_distracted"], color = "#BBB4D6")
plt.subplot(2,3,4)
sns.boxplot(dataset["no_previous"], color = "#FADAE2")
```

```
plt.subplot(2,3,5)
sns.boxplot(dataset["ins_premium"], color = "#F8B3CA")
plt.subplot(2,3,6)
sns.boxplot(dataset["ins_losses"], color = "#CC97C1")

C:\Users\raman\AppData\Local\Temp\ipykernel_9616\3332801330.py:2:
MatplotlibDeprecationWarning: Auto-removal of overlapping axes is
deprecated since 3.6 and will be removed two minor releases later;
explicitly call ax.remove() as needed.
   plt.subplot(2,3,1)

<Axes: >
```

We can incur from this graph that Alcohol has the highest number of outliers

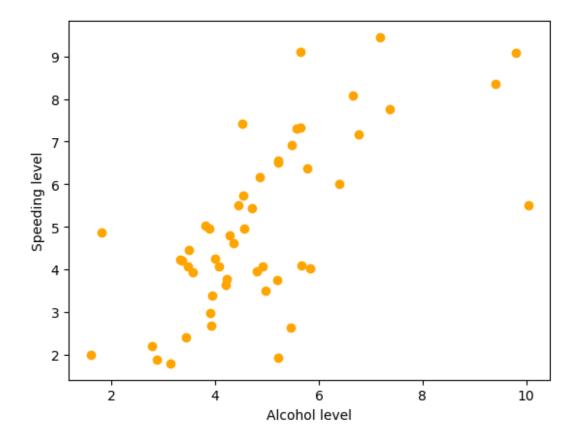

## **Bivariate Data**

## Scatterplot

```
x = dataset["alcohol"]
y = dataset["speeding"]
plt.scatter(x, y, color = 'orange')

plt.xlabel('Alcohol level')
plt.ylabel('Speeding level')
```

#### Text(0, 0.5, 'Speeding level')

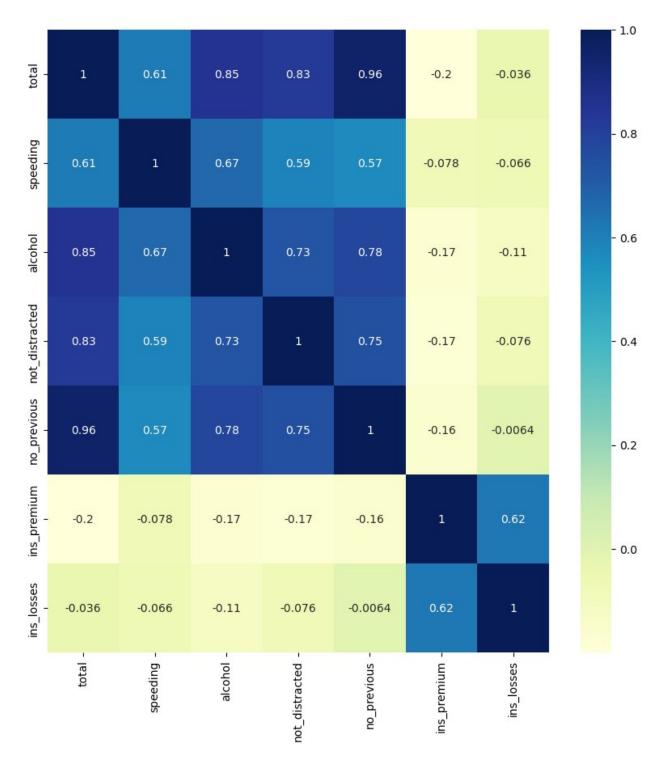

From this graph, we can understand that higher the alcohol level of a person, there is a higher chance of speeding level as well

## Correlation Heatmap

```
corr = dataset.corr()
plt.subplots(figsize = [10,10])
sns.heatmap(corr, annot = True, cmap= "YlGnBu")

C:\Users\raman\AppData\Local\Temp\ipykernel_9616\1155716378.py:1:
FutureWarning: The default value of numeric_only in DataFrame.corr is deprecated. In a future version, it will default to False. Select only valid columns or specify the value of numeric_only to silence this warning.
    corr = dataset.corr()

<Axes: >
```

From this data we can understand that there is a very high correlation between multiple variables. Insurance premium and insurance loss are having a good correlation whereas these both have very weak correlation with the rest of the categories
